

RobotC

- ROBOTC is a multi-platform programming language for popular robotics systems.
- It is the **premiere** robotics programming language for educational robotics and competitions.
- Created by engineers and educators at Carnegie Mellon University, **RobotC** was modelled after the **C-Programming Language** and has nearly identical traits and syntax.
- It has an Easy-to-Use Development Environment, that is used by thousands of people from beginners to professionals.
- Thousands of videos, lessons, and other resources can be found online to guide and assist users.
